How to make Realistic Books in greenstone with PDF documents

You can make realistic books with pdf files in greenstone without converting to html format. But you have to do some modification in the source code of pdf plugin.

1. Locate the file **PDFPlugin.pm** which is located at

   C:\Program Files\Greenstone\perllib\plugins.

   Look for a line like in PDFPlugin.pm

   push(@$html_options,"-input_encoding", "utf8");

   and add the following line underneath it:

   push(@$html_options,"-use_realistic_book");

2. Save and close the file.

3. Set the **–use realistic book** option in HTMLPlugin

4. Make sure that your PDFPlugin is set to **convert ot HTML**

Then **rebuild** the collection and now you can have both realistic book and the pdf version of the same document in the collection.
