How to make Vietnamese as default interface language of Greenstone Digital Library ?

To make Vietnamese as the default language, there may be two ways. The first way is modifying system configuration file (main.cfg). In order to do so, you could follow the following steps:

➢ Go to "**etc**" folder in Greenstone program folder (may be C:\Program Files\Greenstone\etc, depends on your installation)
➢ Use Notepad or Wordpad to open the file: main.cfg
   At the following line at the end of file:

>   #Set default language to Vietnamese
>   cgiarg shortname=l argdefault=vi

➢ Save file
➢ Restart the Greenstone.

I hope the default language of your interface will be Vietnamese

The second way: Start the **Greenstone =>** at the GSDL home menu, click **"Preferences"** => select "Tieng Viet" (Vietnamese) in the box Interface language; => save and go back to Home (Trang chu).
